

ABSTRACT OF THE DISCLOSURE

An apparatus and method for providing recruitment information, including a memory device for storing information regarding a job opening, a position, an assignment, a contract, and/or a project, and information regarding a job search request, a processing device for processing information regarding the job search request upon a detection of a searching event, wherein the processing device utilizes information regarding the job opening, a position, an assignment, a contract, and/or a project, stored in the memory device, and further wherein the processing device generates a message containing information regarding a job opening, a position, an assignment, a contract, and/or a project, wherein the message is responsive to the job search request, and a transmitter for transmitting the message to a communication device associated with an individual in real-time. The processing device stores information regarding the recruitment process between the individual and an employer.
